Notes:

- *1. Based on the standard 4-pole induction motor. The selected inverter must have a higher output current rating than the motor.
- *2. The default setting of A510s takes HD (heavy duty mode) as the base. To switch A510s to ND (normal duty mode) set parameter (00-27) to 1. When switching to ND (normal duty mode), the frequency will change to 2kHz.
- *3. The default setting of carrier frequency in HD mode is shown in right side table, if the setting value is higher than default setting, de-rating may be required.
- *4. The default setting of carrier frequency in ND mode is 2kHz, if the setting value is higher than default setting, de-rating may be required.
- *5. If control mode is set to SLV mode and maximum frequency is larger than 80Hz, the carrier frequency range is 2~8kHz.

Wiring Diagram

Notes:

- *1: Models 200V 1 ~ 25HP and 400V 1 ~ 30HP or lower ratings have a built-in braking transistor. To use this braking transistor a braking resistor can be connected between B1 and B2. Besides, for 400V class 40HP, there is built-in braking transistor model, but without DCL terminals.
- *2: Use SW6 to select between Sink (NPN, with 24VG common) or Source (PNP, with +24V common) for multi-function digital input terminals S1~S8.
- *3: Use SW3/SW4 to switch between voltage (0~10V) and current (4~20mA) input for Multi-function analog input 2 (AI2). Besides please also check parameter 04-00 for proper setting.
- *4: Run Permissive input SF1 and SF2 is a normally closed input. This input should be closed to enable the inverter output. To activate this input remove the jumper wire between SF1/ SF2 and SG.
- *5: When using the open collector for pulse input, it doesn't need resistance because of built-in pull-up resistance.
- *6: AO1/AO2 default setting is 0~10V.
- *7: Both 200V class 50HP~150HP and 400V class 100HP~425HP have built-in DC reactors.
- *8: It need turn on the switch for the terminal resistor RS485 in the last inverter when many inverters in parallel connection.
- *9: Only the model 200V 3~40HP and 400V 5~75HP provide P1 terminal, for external DCL connected between P1 and P2, P1 and P2 are short-circuited before shipping out from the factory.
